(54) IMAGE CONTROL DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To improve the processing speed without using a high-speed CPU by making only the image a target of updating, of which a display mode is changed.

SOLUTION: In a character string alteration processing, 18 character strings, 6 lines of OBJB code, are read from a storage area of ROM 2 according to a cross key operation as the reference to a cursor position scrolled in accordance with value of a pointer register i, and when the read OBJB code is a space (blank), a transparent character (transparent color designation) is set, when it is not the case, the object B character (character image) specified by the OBJB code is set. Namely, with all the characters altered in display set to object B image, a corresponding OBJB code is designated in the case of altering display, and a transparent color may be designated in the case of erase display. Thus, a high speed image display is made possible.
